Team Plan

The Git repository is at https://github.com/shashkambh/assignment4-422c

Shashank wrote the main method to parse input and wrote the walk, run, and reproduce functions in the Critter class. His two custom classes were Critter1 and Critter3, which represent a Cat and an Alien respectively.

Pranav wrote the printWorld function and wrote the code to resolve fights in worldTimeStep. He also ran the JUnit tests and checked to make sure the code worked. His custom Critter classes were Critter2 and Critter4, which represent a Mom and a Cow respectively.

Both worked together to come up with the functions required to implement all the required methods.
